

OUR HEALTH, SAFETY AND ENVIRONMENT (HSE) POLICY

Providing occupational safety & health at work and workplace and respecting environment while producing high quality products by using state-of-the-art technologies is the basic operation principle of İzvar Ambalaj San. Tic. A.Ş. as one of the leading environment-friendly companies in the industrial packaging sector in Turkey.

Our industrial packaging reconditioning plant, being the first licensed reconditioning facility in Turkey, picks up the used packaging products from the premises of our customers for reprocessing and reconditioning them, and thus contributes not only to saving of natural sources but also to becoming conscious of the people in environment-related matters.

We are committed to improve continuously the performance of our “Health, Safety and Environment Management System – HSEMS”, and to ensure their compliance with all the laws and ordinance governing our operation.

Our “Health, Safety and Environment Management System – HSEMS” aims not only to make both our employees and our subcontractors and suppliers etc. conscious of protecting the environment and to saddle them with responsibility for acting properly, and, when needed, to take the necessary steps, but also to ensure any health, safety and environment related issues to be considered prioritily in making planning and decisions.

In our production process, we always target to diminish the quantity of wastes arising and the natural sourced being used per unit production, to reduce the impact thereof to the environment, to keep any work health and safety risks under control, and thus to contribute to the prevention of pollution and productively utilization of natural sources.

Our commitment is to fulfill our responsibilities against both our today’s community and the future generations, and to act conscious in protecting our global environment and to deploy such consciousness.
